EDUCATION

University of Michigan

Ann Arbor, MI

Bachelor of Science in Computer Science, Minor in Math

May 2027

- Awards: Dean's Honor List Winter 2024, Fall 2024, Winter 2025 GPA: 3.5/4
- Activities: Alpha Kappa Psi, ALPFA, Society of Hispanic Professional Engineers, V1
- Relevant Courses: Discrete Mathematics, Statistics, Data Structures and Algorithms, Computer Architecture

EXPERIENCE

Tech Developer Intern

NYC / Remote

Sponsors for Educational Opportunity

May 2025 – Present

- Completed 300+ hours of software engineering training focused on data structures and full stack development
- Worked in Scrum-like teams to design, test, and implement a full-stack award-winning application using Python (Flask), MySQL, HTML, JavaScript, CSS, and multiple API integrations, then presented app to over 150 people

Software Engineer Intern

Miami, FL

Palla (YC S21)

June 2024 – August 2024

- Integrated GPT-3.5 Turbo into Zendesk via REST API for AI-powered ticket tagging and macro-based responses, increasing daily ticket throughput from 180 to 400 and improving response consistency
- Built Python script to automate financial spreadsheet processing – time conversion, currency standardization, and bank-based splitting – saving CFO 3+ hours per week

PROJECTS

Hermes – AI Sales Agent | *Python, FastAPI, Next.js, React, TypeScript, PostgreSQL, Gemini* Mar 2025 – Present

- Built an autonomous B2B sales agent that discovers leads via Google Places, enriches them through Gemini 2.5 with a hallucination guard verifying extracted emails against source text, and drafts personalized cold emails via a 5-tier hook system
- Designed multi-channel outreach across email and LinkedIn with auto-followup scheduling, reply detection, unsubscribe handling, and Calendly webhook integration
- Developed a genetic algorithm budget optimizer modeling enrichment as a 0/1 knapsack problem, and a lead scorer using logistic regression and decision trees to prioritize high-probability leads

FlyerStudio.AI | *Next.js, React, TypeScript, Supabase, FAL.ai, Gemini, Stripe*

Feb 2026 – Present

- Architected a SaaS platform for AI event poster generation, routing requests across 8+ distinct pipelines using input-signature detection to select the optimal model workflow based on user-provided assets
- Engineered atomic concurrent generation with PostgreSQL row-level locking and stored procedures, enforcing per-user caps with stale job self-healing and race-condition-safe slot reservation
- Built credit-based billing with Stripe, featuring atomic credit deduction via PostgreSQL RPCs, partial refunds on variant failures, and an immutable transaction ledger

Movi | *Python, Flask, SQLite, REST API, JavaScript, Jinja2*

July 2025

- Engineered full-stack movie rating app winning SEO best project award; built AI chatbot with Gemini API using conversational memory, and a content-based recommendation engine with Scikit-learn cosine similarity

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL, HTML/CSS **Frameworks:** Next.js, React, FastAPI, Flask, Tailwind CSS

Tools: Git, Supabase, PostgreSQL, Stripe, Vercel, VS Code, IntelliJ, Cursor **Libraries:** pandas, Matplotlib, Scikit-learn, Zustand, SWR

Programs: MongoDB NEXT in Tech Summit, Wayfair Early Leaders Program

LEADERSHIP & SOCIAL IMPACT

Muuk

Miami, FL

Co-Founder

July 2019 – Present

- Co-founded biomedical startup producing \$200 chemo cold caps (vs. \$900/session) reducing hair loss by 60%+; raised \$5K to prototype, **filed patent** for self-contained cooling system, launched website attracting 3,000 visitors
